ISO TANK MANAGEMENT

Simplifying Chemical Logistic Operation

NAME PLATE DATA

Container name plate data can be conveniently retrieved at any time, facilitating quick information for efficient management.

INTERACTIVE DASHBOARD

The dashboard shows number of product-wise container's status. Clicking on a number reveals more details about all container's status with movement history.

SEARCH & FILTER OPTION

Users can access container information through search and filters for a specified time frame, facilitating efficient tracking.

USER ACCESS CONTROL

Users are granted access to specific container details that are associated with their respective responsibility mappings.

REAL TIME STATUS

The software provides real-time visibility of the container's status from entry to exit within the premises.

LOGISTIC HISTORY

The software provides information regarding product allocation & previous movement for a selected duration. It helps to find number of transitions utilization.

PAPERLESS WORK

The entire review and approval process is digital with notification emails, saving paper and benefiting the environment.

REDUCE HUMAN ERROR

The software is designed to eliminate human error e.g. preventing product filling & dispatch if condition is not fulfilled.

ISO Container Management is a comprehensive web application tailored to streamline chemical logistics efficiently. By consolidating container details onto a single platform, it offers seamless monitoring and tracking within the company's premises. The app's robust features include step-by-step verifications and date validations, ensuring precision in dispatching chemicals. With live data provision and a range of search and filter options, the need for constant supervision is minimized, enhancing operational efficiency.
